HospiX Connect

Control HospiX 2 via a Property Management System.

The HospiX Connect add-on enables full integration of all HospiX solutions into existing operating structures. HospiX Entry/ Open/ IGS and Voice need to be used for administration purposes only.

Trained users of a PMS application continue to use the familiar user interface and its functions.

Range of Functions

Gererally, the HospiX Connect interface supports all features of all HospiX solutions*. However, the range of functions depends on the functions supported by the PMS application.

HospiX Connect especially lays a focus on the billing of telephone and IP charges to guests at minute prices.

Of course, basic features such as user change-over, wake-up call and room status are also supported.

Another feature is the post-paid billing of guests' IP traffic. The easy access control by assigning a PIN and the convenient guest login without the need to change any laptop settings are available as is.

All charge data is transferred to the PMS application for invoicing. Therefore, both operation as well as invoicing run via the familiar PMS application.

Interfaces

- Fidelio Front Office
- Amadeus Hotel Front Office
- Protel Hotelsoftware
- Standard interfaces for other PMS applications

The current versions of the PMS applications are always supported.

An overview of the currently supported PMS systems you can find on our homepage www.msi-telesolutions.com/en/hospixconnect.php or on request.

To learn more, visit our website www.msi-telesolutions.com. Or you simply give us a call. We would be happy to advise you.

*HospiX Connect is included into HospiX Open.
